HTTP Message sends means of transfer in the form of an HTTP Request to an HTTP Server. The Message Body contains the content of the request, which can be divided into Request and Response Headers. The Request Line includes the method, request URI, and HTTP version ID. The Status Line contains the status code, reason phrase, and HTTP version ID. The Entity Attribute can be mapped to the Role and Relation Name in the Entity Relationship Diagram with 1:1 and 1:n Cardinality Range.
